

Remanufactured Components

Forklifts are really pricey pieces of machinery. A five thousand pound new electric unit could cost between eighteen thousand to twenty five thousand and a few thousands of dollars more will be invested for a battery and a battery charger. The same internal combustion forklift of similar lift capacity will cost slightly less and the diesel models that are capable of heavier lifting capacities can cost upwards of one hundred thousand dollars. Reconditioned lift trucks are an alternative so as to save much cash as they cost less than half the price of brand new units.

Some buyers may be skeptical about obtaining a used or reconditioned lift truck since they feel they will have to spend more on upkeep. Nevertheless, a correctly reconditioned lift truck will be able to function just as well as a brand new one. Even though your lift would get heavy use, as long as you take good care of the machine, it will serve your needs and possibly save you a lot of cash.

It is vital to establish what the seller means by a reconditioned or refurbished forklift when considering purchasing a used lift truck. Many companies do a really good job reconditioning a model prior to selling it. This consists of disassembling the forklift, rebuilding the engine, sandblasting the lift and then reassembling the whole thing and finishing with a fresh coat of paint.

To properly and thoroughly reconstruct a forklift engine, a good business will entirely disassemble it. A heat cleaning system can then be used to clean all the components. When this step has been done, all of the components are checked to see if they have any breakage, any extensive wear or any defects. Some parts such as cylinder blocks, connecting blocks, cylinder heads and crankshafts are reground, resurfaced and resized if necessary. Various components like nuts, bolts, gears and that. are replaced or repaired as needed.

The engine is rebuilt by hand when the overhaul has been completed. After putting it back together, a series of tests are applied to the working equipment. This is done to be able to check all of the components to guarantee there are no issues or leaks. If any problems occur, the necessary adjustments are done.

There must be no reason to be worried about buying a reconditioned or refurbished forklift from quality sellers. The process of rebuilding the machinery ensures the utmost in dependability. Upkeep costs may actually work out to be less since you will avoid the initial phase of higher maintenance projections which a new lift truck has as it is broken in. By following routine maintenance schedules and taking care of the equipment properly, a reconditioned lift truck would serve you well.
