

Aerial Work Platforms

There are a variety of lift truck accessories available on the market. They could help transform your forklift so that you can expand your ability to pick stuff up or accomplish clean up tasks and material handling with greater ease.

Some accessories were specially meant for the forks themselves. For example, blade extensions could be utilized when you need a lot more blade length, that increases lifting capacity. Blade extensions come in lengths varying from forty eight to one hundred twenty inches. Rounded or triangular attachments are another variety used whenever transferring rolled material in order to ensure it does not roll off of the standard flat blades.

Examples of lifting accessories include pivoting and telescoping crane or boom accessories. They can come in several different styles and are normally designed for moving metal bars, lumber, poles and other types of bulky stuff. Other accessories like for instance various styles of hook plates and hooks are accessible to be able to pick up items using a chain or sling. Magnetic lifters and slab lifters are other items that can be utilized with hook attachments. Slab lifters are specialized accessories that are utilized for carrying various materials which are delivered in a slab or sheet format. Rug rams or carpet poles are other lifting tools that connect to your forklift to make transferring rolls of carpet much easier. The accessory connects onto the lift truck's blades and has a pole that goes through the middle of the carpet roll.

There are many kinds of forklift attachment intended for facility maintenance such as snow forks. These industrial blades could be connected to front end loaders and meant for transferring materials like for instance mulch, snow as well as dirt. Other common cleanup accessories comprise standard sweepers and magnetic sweepers. Standard sweepers includes a broom that the forklift blades connect onto for sweeping big spaces such as parking lots or warehouse and factory floors. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is utilized in places where there is lots of metal debris like on shop floors for instance. Sweepers have widths up to 60 inches and this surface area makes clean up quick and effortless.

Material spreaders are other accessories used on forklifts. These spreaders are useful for a range of applications like for example spreading seeds, ice melt, rock salt, pellets, fertilizers and insecticides.

Another optional lifting attachment are work platforms. These could be used by numerous various companies on a daily basis. Platforms may vary in size from 36" x 36" to up to 60" x 60". Several units may be accessible and are capable of folding up and storing into a smaller place. Work platforms are designed to raise personnel up to an overhead location utilizing the forklift. Larger platform units have added space for employees to be able to bring tools and other essential items for the task. Usually work platforms are made of steel or ploy material.
